QuickBooks Online → Practical Stock Planner: File 4 – Open_Supply (stock you've ordered but not yet received)

Practical Stock Planner – Time-phased stock planning. One short guide for one file. No IT skills needed – just a QuickBooks Online login with access to reports, and Excel.

If a QuickBooks label differs slightly, pick the closest match.

What this file is: your open purchase orders – what's still to arrive, and when. Columns: `Supply Order ID`, `SKU`, `Supply Qty`, `Due Date`.

Before you start

1. **Download the Open_Supply template** from Practical Stock Planner. Open **Load Data**, then open **Templates** in the sidebar. Practical Stock Planner accepts **CSV files only** – one CSV file per input file; this one starts from `template_Open_Supply.csv`. **Keep the template's header row exactly as it is.** After filling it in Excel, save it with **File › Save As › CSV UTF-8 (Comma delimited)**.
2. **Purchase orders need Plus or Advanced.** "Purchase orders are only available in QuickBooks Online Plus and QuickBooks Online Advanced" (Run purchase order reports). *Open Purchase Order Detail* is ticked for **Plus** in Intuit's report table (Reports included in your subscription). On another plan, type your open POs into the template.
3. **Have your Product/Service List export ready** (QuickBooks products guide). This report has no SKU column, so you look the SKU up by name.
4. **No due date on purchase orders.** The report has a **Transaction date** but **no due/expected date** column. You type the expected arrival date.
5. **Update overdue dates.** Supply dated **before** the plan start date is ignored.
6. **Duplicate rows are fine.** Rows for the same SKU and date are simply added up (the app sums by SKU per week, with weeks starting Monday).
7. ⚠ **Report exports are not a clean table** (title rows, heading rows, *Total for …* and *TOTAL* rows) and **dates come out as text** in `DD/MM/YYYY` form. Convert them (*Data › Text to Columns › Finish*, with DMY dates; or `=DATEVALUE()`). For the upload itself, DD/MM/YYYY text is fine with **Date format in your files** = **Day/Month/Year**; a US export in MM/DD/YYYY needs **Month/Day/Year**.

> ⚠ **Don't use "Open Purchase Order List by Supplier".** It's one row per PO with **amounts only** – header `Date, No., Memo, Ship via, Amount, Open Balance` – **no product and no quantity columns**. It can't give you Supply Qty.

Export steps

Source: the **Open Purchase Order Detail** report – one row per open PO line with the date, PO number, supplier, product, quantity, billed, received and backordered quantities and the open balance.

#	Step	Status
1	**Reports › Standard reports**.	· Run purchase order reports
2	Search **Open Purchase Order** and open **Open Purchase Order Detail** (not *Open Purchase Order List by Supplier*).	
3	Set the date range to **All Dates**. ⚠ The default range left out an older open PO in the test (dated Dec 2025) – with *All Dates* it appeared.	
4	No customising needed – the quantity columns are there by default.	
5	**Export ▼ › Export to Excel** (or CSV/PDF).	

Actual header row (row 5): `Transaction date, No., Supplier display name, Product/Service full name, Account Name, Quantity, Billed quantity, Received quantity, Backordered quantity, Total amount, Received amount, PO open balance` Data rows start in column B; column A holds product/category heading rows, then **Total for …** and **TOTAL** rows. Example from the test: `24/12/2025 | 1005 | Hall's Promotional International | Promotional items:Misc | … | 100 | 0 | 0 | 100 | 113.43 | 0 | 113.43`.

Column mapping

QuickBooks (Open Purchase Order Detail)	→ Practical Stock Planner	Notes
No. (PO number)	**Supply Order ID**	
Product/Service full name	**SKU**	There's **no SKU column** by default – look the SKU up from your Product/Service List by full name (`=XLOOKUP(E6, ProductList!A:A, ProductList!G:G)`). If *Customize* does not offer a SKU column, keep using that lookup. Drop lines whose product isn't an Inventory item.
Backordered quantity	**Supply Qty**	The quantity still to come (in the test: ordered 100, received 0, backordered 100). Cross-check: Quantity − Received quantity.
(no due date column)	**Due Date**	Type the expected date, or leave blank → plan start + default lead time. Don't use *Transaction date* – that's the order date.

How "still to receive" works: you receive a PO by adding it to a **bill, cheque or expense** Add purchase orders to expenses, bills, or checks. For a part-received purchase order, use **Backordered quantity** as the quantity still to come. If that figure does not match what you still expect, open the purchase order and type the remaining quantity.

Excel clean-up

1. Delete the title rows, heading rows in column A, *Total for …* and *TOTAL* rows.
2. Delete lines that aren't Inventory items.
3. Add the SKU by lookup; keep **No.**, SKU, **Backordered quantity**, and type the **Due Date**.
4. Paste into the **Open_Supply** template (paste as values).

> **Keep leading zeros in SKUs.** Format the SKU column as *Text* before you type or paste SKUs, then save with *File › Save As › CSV UTF-8 (Comma delimited)*. If you open a CSV directly in Excel (e.g. by double-clicking it), Excel can strip leading zeros (`00123` becomes `123`) – import it via *Data › From Text/CSV* instead and set the SKU column to *Text*. In Google Sheets: select the SKU column and choose *Format › Number › Plain text* before you type or paste, then save with *File › Download › Comma-separated values (.csv)*.

Checklist

- ☐ Template header row unchanged, header in row 1, saved as a CSV file (*File › Save As › CSV UTF-8 (Comma delimited)*).
- ☐ From **Open Purchase Order Detail** with **All Dates** – *not* from Open Purchase Order List by Supplier.
- ☐ Supply Qty = **Backordered quantity**, in single units.
- ☐ Due dates typed (or blank) – none before the plan start date.
- ☐ SKUs exactly match your SKU_Details file.
- ☐ No open purchase orders? Keep the header row and add no data rows. That means none are open.

If the upload is refused: a workbook or other non-CSV file gets “Couldn't use” followed by the file name, then “Please upload a CSV file. Practical Stock Planner imports CSV only.” Save it with *File › Save As › CSV UTF-8 (Comma delimited)* and upload the `.csv`. A file that is not UTF-8 gets “Couldn't read” followed by the file name, then “Save it as UTF-8 or UTF-8 with BOM and try again. In your spreadsheet, choose Save As > CSV UTF-8.” Save it again as CSV UTF-8 and upload the `.csv`.

Using Google Sheets instead of Excel? Save each file with *File › Download › Comma-separated values (.csv)*. To keep leading zeros, select the SKU column and choose *Format › Number › Plain text* before you type or paste SKUs.

Set the date format before you upload. On the Load Data page, set **Date format in your files** to match your dates: **Day/Month/Year** (the default, e.g. 05/10/2026 = 5 October) or **Month/Day/Year** (US-style, e.g. 10/05/2026 = 5 October). Only Week Starting Date (Forecast), Ship Date (Open Sales Orders) and Due Date (Open Supply) are read as dates. Dates like 2026-10-05, 2026/10/05 and 13-Apr-2026 are always accepted, whichever setting you choose. If you change the setting, upload the file again. A date that can't fit the setting (e.g. US-style 10/13/2026 under Day/Month/Year) stops the upload, and the message names the file, column, row and value.
